

LIVE ON THE APP STORE

Turn reading progress into a path back to the library.

A free, library-first reading adventure that helps children build skills, discover books, and connect with their local branch.

Why it exists: Founder Jesse Bray grew up homeless and dyslexic; a small library became his sanctuary. Inklings is built to help more children find that same doorway.

Read. Prove it. Discover. Return.

- 1 Read in small, achievable steps**
Children explore 100 public-domain classics, with reading-level support, tap-to-define vocabulary, and read-aloud.
- 2 Show real understanding**
Comprehension challenges reward honest reading with experience points, streaks, and visible progress.
- 3 Find the physical book**
The app points children toward their library and makes discovering a book on the shelf part of the adventure.
- 4 Come back for the next chapter**
A provisional library affiliation turns a branch visit and real library card into meaningful next steps.

Safe, accessible, free

- **No ads or paywalls.** Free for children and libraries.
- **Data-minimized by design.** No child email accounts or third-party advertising analytics.
- **Accessibility is core.** Read-aloud, level bridges, and dyslexia-conscious design support more readers.
- **The library stays central.** No open chat with strangers, and no content marketplace around children.

100 classics

From *The Tale of Peter Rabbit* to *Treasure Island*, scaffolded across reading levels.

Founding libraries shape what comes next.

Participation is free. Founding partners get first say in the library finder, branch handoff, accessibility, and future catalog integrations. The goal is simple: help families discover your library, get a real card, and keep reading.
